

UNIFIED ENDPOINT MANAGEMENT

DEVICE MANAGEMENT

Fusion UEM's extensive device-management capabilities allow you to monitor and manage devices in a granular manner, including monitoring device performance, online status, content and more. In addition, authorised administrators can make automatic changes to many settings, using direct methods or group profiles. Productivity features include the ability to provide users with access to the company e-mail systems in a secure manner. Security features include disabling of in-built peripherals such as cameras, initiating remote-wipes of company-owned apps and information, and locking devices when required.

APPLICATION MANAGEMENT

Powerful application management allows complete control over which applications are made available to users, either on a one-by-one basis or using built-in group profiling. New applications or updates can be pushed silently to devices as and when required. On mobiles, corporate applications are kept separate from personal applications, so network access can also be restricted to the company's own networks for specific applications. Fusion UEM's mobile application store allows users to choose which applications to install, their choice limited to the current application profile.

CONTENT MANAGEMENT

Fusion UEM ensures that users can easily access internal document stores, including content-management systems like SharePoint. Fusion UEM can also monitor and restrict access to specific URLs, in order to maintain organisations' security policies. Fusion's Secure Channel in conjunction with Fusion ADC makes VPNs a thing of the past, providing safe and secure communications between device and corporate networks.

MONITORING AND ANALYTICS

Fusion UEM includes a wealth of monitoring and analytical tools. Application usage can be monitored, as well as cellular, data and wi-fi usage; additional benefits are provided by the geo-location tracking.

MANAGEMENT MADE SIMPLE

Fusion UEM includes a complete discovery and management toolkit, enabling you to index and administer every device quickly and easily. Granular reporting allows you to monitor and audit every device, a select group of devices or specific machines. Discovery tools can catalogue and manage both mobile and static devices, regardless of location. Fusion UEM delivers a comprehensive overview of network assets, providing details on software patches, licences, and operational health data.

GRANULAR CONTROL AS STANDARD

The simple-to-use web interface belies the power of Fusion UEM's comprehensive administration tools. Thin clients, PCs, laptops, kiosks, tablets, and smartphones are all instantly visible and configurable through a single unified interface. Fusion UEM supports a wide range of operating systems, providing a complete management toolkit for every device. Built-in software metering allows you to deploy and manage licences, ensuring full use of your resources. Additional tools enable your team to closely monitor software, including antivirus patch levels, and to deploy updates quickly and easily.

INCREASED AUTOMATION

Built-in scheduling tools allow the automated creation of tasks and profiles for remote devices. PowerShell, VBScripts and shell scripts can also be remotely executed. Fusion UEM assists with unattended management activities, using event-based actions to deploy updates, allocate licences or execute scripts for advanced reconfiguration.

MANY LOCATIONS, ONE INTERFACE

Fusion UEM scales seamlessly with the multi-tenancy add-on, allowing IT service providers and system integrators to manage multi-company IT resources affordably and effectively. All assets, regardless of location, are available for management and reporting through our single interface - centralising and simplifying IT management.

WHY YOU SHOULD USE FUSION UEM ENDPOINT MANAGEMENT SOFTWARE

ENTERPRISE GRADE

Fusion UEM is a true enterprise grade management software product, allowing management of hundreds of device types, powered by a variety of operating systems,

HIGHLY AFFORDABLE

With its perpetual licensing model, and optional support contracts, Fusion UEM provides the best value for money compared to other competitors - you own it!

TASKS AND TEMPLATES

Comprehensive task definition coupled with customizable template management makes Fusion UEM the ideal candidate for busy IT environments.

SOFTWARE MONITORING AND DEPLOYMENT

When you need to deploy new versions of software while monitoring and managing license usage, Fusion UEM delivers.

TECHNICALS

Desktop PCs powered by the Windows operating system can be managed using Fusion UEM. All operating system settings and definitions are manageable, together with full control of which applications can be installed, uninstalled, and even permitted to run.

No matter where you are with your laptop, Fusion UEM can manage the device with outstanding ability. The device's operating system can be monitored and updated whenever the location and network capabilities suit. The location of the device is also monitored using GPS or GEO-IP location modules within Fusion UEM.

Thin clients also form part of Fusion UEM's management capabilities. Devices powered by Windows Embedded 7 Standard, Windows 10-IoT LTSC and LTSC, VXL Gio Linux and Lenovo LeTOS can be fully managed and deployed by Fusion UEM, complete with the capability to remote control the devices.

Fusion UEM supports HP Anyware Trust centre based Zero Client management. Enabling secure access to digital workspaces, Fusion UEM manages zero client devices that are powered by HP Anyware, so that administrators can monitor, update and deliver a consistent and seamless user experience.

Management of mobile devices is also a forte of Fusion UEM. Mobiles from most manufacturers, powered by Android and iOS form part of the manageable device's basket. Unlike other vendors, Fusion UEM can manage Google authorized, rooted and open-source flavours of Android, as well as Apple DEP and non-DEP.

Fusion UEM also manages a variety of tablet devices. Not only do we control and manage tablets powered by stock Android and iOS, but also specialist tablets from vendors such as ProDVX that are used within meeting rooms and the hospitality sectors.

The logistics and retail industry segments are a wide user of Fusion UEM, and in particular to manage and monitor the variety of hand scanner devices used in shops and warehouses. Fusion UEM supports a number of vendors, including but not limited to Zebra, Honeywell, and Cipher Labs.

Retail establishments also utilise point of sale devices, mostly powered by Windows POS that is built using Windows Embedded. Fusion UEM is fully capable of managing systems that are powered by Windows POS, allowing the administrators to monitor, update and deliver a consistent user experience.

HP ANYWARE ZERO-CLIENT MANAGEMENT

DEVICE MANAGEMENT

- Full featured device information dashboard
- Device Discovery: Auto discovery of devices
- Device Inventory: List, Synchronization, Add, Edit & Delete
- Device details: Device dashboard, Device configuration
- details, device hardware & software information
- Device control commands: Restart, Shutdown, Factory Reset, Inventory sync.
- Device monitoring: On/off, connection status etc.

TRUSTED BROKER CONNECTIONS

- Management of multiple trusted broker connections and support for related configuration settings, update & delete.
- Create/Delete/Manage trusted broker connection and related settings.
- Certificate configuration & Connection security mode

MANAGEMENT SOFTWARE FEATURES

- Multi level OU / Group management support, Default Configurations for Group inheritance
- Task management, Template management, Task & Template Scheduling, Recurring tasks
- Device Asset Inventory management, tracking & reports.
- Incident management including Device Monitoring & Preventive maintenance.
- OTA upgrade patch management

RBAC & USER GROUPS

- Multiple Administrator Accounts & MFA
- Admin User roles (configurable user rights)
- Admin User Active Directory integration
- Concurrent administrative user access

DEVICE CONFIGURATIONS

- NTP, TimeZone, Keyboard layout/Variant (including repeat delay, repeat rate), Mouse, Date & Time format,
- Networking, Audio, Power, Imaging, Branding & Assets, Certificates, UI Language selection, Log level settings, OTA Updates & USB device management

DEVICE COMPLIANCE

- Support for both default & desired configurations, Device baseline configuration/policies creation, compliance tracking & monitoring, compliance report

TRUSTCENTER CONFIGURATION

- Create and manage Trustcenter service account.
- New account password change
- Automation of Service account creation
- Automatic sync for predefined interval
- TrustCenter connection status
- Multiple TrustCenter connection support
- Multi-tenancy Support to connect to desired Trustcenter Installation

DASHBOARDS, REPORTS & AUDIT LOGS

- Device health monitoring
- Zero client devices logs import & corresponding reporting.
- Management software reports and logs including asset management reports & audit logging.
- Trustcenter server logs, Support bundle imports.
- Dashboards, Log analytics, Mailer Engine for auto emailing of report's

TECHNICAL SUPPORT & PRODUCT MAINTENANCE

First year support and maintenance are provided with perpetual license purchases. SaaS licenses include support and maintenance as part of the license purchase.

When buying Fusion UEM Perpetual, we advise you to purchase an additional support extension for three years.

FUSION UEM LICENSING

Simplified licensing ensures that you can bring your Fusion UEM installation on-stream as quickly as possible.

HOW IS FUSION UEM LICENSED?

Fusion UEM is available for purchase using perpetual or SaaS licensing.

Perpetual licenses purchased are required to be entered into the Fusion UEM server licensing page, and then activated across the Internet or manually using e-mail.
