

Fusion ADC Load Balancer

powered Edgenexus Core

Make your applications faster, more secure, more reliable and easy to scale — while saving money

Why are load balancers so important?

Load balancers distribute incoming traffic efficiently between available servers and can also provide a range of other services including:

- Global server load balancing
- Web application firewalling
- Traffic management
- Proxying
- Application acceleration.

Together, these services maximise application speed, security, reliability and scalability.

All this functionality ensures load balancers are very important for scalable cloud and server stacks. Perhaps that's why some vendors make them really complicated—and expensive.

But they don't have to be.

The Fusion ADC Load Balancer delivers:

Affordability

Our load balancers are significantly less expensive compared to other top tier vendors—while retaining incredible performance. Because they're so easy to use, they also ensure you get maximum value.

“Extremely competitive pricing”
MIC

“Lowered the total cost of ownership”
Miller Homes

Usability

Configurable in minutes and easy to manage through an intuitive interface we give you the power and confidence to get the very best from your applications.

“Incredibly simple to deploy”
digdat™

“Vastly better user interface”
SDL

Reliability

Maximise uptime for your web-based applications and websites, with added peace of mind. Unrivalled support includes remote troubleshooting.

“ Superb day-to-day support ”
Addison Lee

“ Eliminates potential downtime ”
MIC

Scalability

What's holding you back? You can ramp up deployment within minutes to scale with increased demand and changes in circumstances.

“ Extremely scalable ”
Colt Ceano

“ Will enable us to expand our requirements quickly and cost effectively ”
Addison Lee

Security

As well as powerful reverse proxy and SSL offload capability, Fusion ADC also has next generation pre-authentication and SSO to further protect web based applications.

For enhanced security the optional Web Application Firewall adds a key layer of protection to defend your applications from sophisticated attacks.

“ The resilience that we require ”
Chime Communications

“ Resilience and performance ”
Colt Ceano

Features

Comprehensive, powerful and couldn't be easier to use

Hardware, Cloud or Virtual Appliance

SSL Offload

Web Acceleration

Pre-Authentication

Global Server Load Balancing

Traffic Management

Layer 4-7 Load Balancing

Automatic Configuration

Clustering

Server Health-Checking

Web Application Firewall

Intuitive GUI

Reverse Proxy

Compression and Caching

Unprecedented Ease-of-Use

Install Fusion ADC onto any approved hardware platform - We certify Cisco UCS B & C, Lenovo Servers as well as popular virtualization platforms - total flexibility through good design

Even more security

Fusion ADC Load Balancer runs on popular hardware platforms as well as virtualization stacks - try it on Lenovo servers today and see how well Fusion ADC performs.

Test it out on any of the virtualization and server stacks shown below.

“invaluable to us”
Addison Lee

 <p>VMware ESX</p> <p>The world's most secure and popular industry standard virtualization</p>	 <p>Microsoft Hyper-V</p> <p>Load and use the Fusion ADC appliances within the Hyper-V framework</p>	 <p>Nutanix</p> <p>World leading hyperconverged virtualization infrastructure stack</p>	 <p>Cisco UCS Servers</p> <p>Industry leading servers, perfect for hosting Fusion ADC clustered appliances</p>	 <p>Red Hat KVM</p> <p>Revolutionizing the virtualization space, KVM is perfect for hosting Fusion ADC</p>

Advanced performance

Guarantee resiliency for mission critical applications

Whether you use a bespoke hardware server or one of the approved virtualization platforms, you can rest assured that Fusion ADC will deliver the very best in load balancing efficiencies along with the security capabilities required for enterprise networking.

“Advanced functionality, cost-effective pricing and superb pre-sales experience.”
MIC

Flexibility through design

Unlock added convenience and lower TCO

Fusion ADC seamlessly integrates with your existing stack regardless of infrastructure provider, offering seamless simplicity and lower TCO compared to other solutions.

“Stellar performance!”
TCS Education System

Why VXL Software?

VXL Software is a global leader in the creation of software for homeworking solutions, unified endpoint management, PC repurposing and digital signage. VXL Software's commitment to quality and competitiveness enables the company to provide software solutions which do not just reset the benchmark within that product category, they also deliver unprecedented value for money.

Who else depends on Edgenexus Core used within Fusion ADC?

We serve a global client base spanning private and public sector

"We chose jetNEXUS based on value for money and the fact that it fitted into our virtualisation policy. We had it setup on our ESX platform in less than one hour and it now supports our 36,000 users!"

Common place applications and custom application deployments including DICOM and Electronic Patient Records

Why choose the Fusion ADC Load Balancer?

Easy to use

Quickly get to grips with powerful features and rapidly scale up to meet demand.

Cost-effective

Enjoy enterprise-grade technology without the price tag

High-performance

Increase security and reduce downtime, backed by unrivalled VXL support
